

## I. Product Purpose

- 1、Used for industry machinery power/motor control, circuit insulation,circuit protection and safety devices etc.,
- 2、Used for vehicle battery distribution and backup;
- 3、Used for converter power control;
- 4、Used for electric vehicle charging hub;
- 5、Used for solar power plant;
- 6、Used for the other DC high-voltage devices.

## II. Product Characteristics

### 1、Controlled high current and high voltage

Sealed with the epoxy resins, filled with inactive gases inside ,it combine the magnetic quenching for making the products bear the high current and voltage.

### 2、Compact structure & low noise for operation

The shape can be made small by using an arc-free gap structure that does not allow the arc to leak.

Due to structure that seals the contacts in the protective gas compartment, efficient and safe shut-off is ensured even if the contact gap is small.

The working noise is small, as is the case when switching large currents.The operation noise is low even switching the high current.

### 3、Good safety performance

The contact is sealed in the sealed compartment, and the arc cannot be leaked, thus ensuring good safety of the product.

### 4、Good Reliability

The contact unit is sealed in a protective gas, so the contact resistance remains stable regardless of the environment. At the same time, the dust proof and waterproof of the contact part is also realized.

### 5、No Special Requirement on Installation Way

The movable part is light in weight and has a large reaction force. The product is less affected by gravity and is installed at the bottom. There is no special requirement for the installation position.

### 6、Diversity Multi-purpose

Standard uses include: battery switches and backup equipment, DC voltage power control, circuit safety protection, etc.

### 7、Conforms with EU RoHS Instruction (2002/95/EC)

## III. Product Model Meaning System

**EVQ10**

**Rated current:**  
“10”=10A

**C**

**Contact form:**  
C:polarity without auxiliary  
contact  
E: non-polarity without auxiliary

**24**

**Coil voltage :**  
“6”=6Vdc, “12”=12Vdc  
“24”=24Vdc, “28”=28Vdc  
“36”=36Vdc, “48”=48Vdc

**D**

**Coil lead-out  
method:**  
D: Wire type,  
without quick  
connect plug

**A**

**Installation method:**  
A=bottom installation

Note: customized coil voltage according to different request

#### IV.Techincal parameter

##### 1、Coil specifications

Coil rated voltage	Working Voltage Range (20°C)	pull-in voltage (20°C) <small>(▲1)</small>	Holding voltage (20°C)	Release voltage (20°C) <small>(▲1)</small>	Rated operating current [rated voltage] (20°C)	Rated coil resistance [ $\pm 5\%$ ] (20°C) <small>(▲1)</small>	Coil power (20°C)	Coil polarity
6Vdc (Us)	Us85%   Us110%	Us75% Max.	Us85 % Min.	Us10% Min.	545.5mA	11Ω	3.3W	×
12Vdc (Us)	Us85%   Us110%	Us75% Max.	Us85 % Min.	Us10% Min.	266.7mA	45Ω	3.2W	×
24Vdc (Us)	Us85%   Us110%	Us75% Max.	Us85 % Min.	Us10% Min.	143.7mA	167Ω	3.45W	×
28Vdc (Us)	Us85%   Us110%	Us75% Max.	Us85 % Min.	Us10% Min.	116.7mA	240Ω	3.3W	×
36Vdc (Us)	Us85%   Us110%	Us75% Max.	Us85 % Min.	Us10% Min.	90.0mA	400Ω	3.2W	×
48Vdc (Us)	Us85%   Us110%	Us75% Max.	Us85 % Min.	Us10% Min.	65.8mA	730Ω	3.2W	×
72Vdc (Us)	Us85%   Us110%	Us75% Max.	Us85 % Min.	Us10% Min.	45.0mA	1600Ω	3.2W	×

▲1 : Absorption voltage, release voltage and coil resistance of products without energy-saving circuit boards may vary with ambient temperature and operating conditions. Therefore, please note that the following theoretical formulas can be obtained according to the temperature coefficient of copper resistance. The calculated values may be slightly different from the actual values. Temperature rise: actual value =  $U * (1 + 0.004 * K)$ , temperature drop: actual value =  $U * (1 - 0.004 * K)$ , where U = the rated value of 20°C, K = current ambient temperature - 20.

## 2.Performance parameter

Product line		EVQ10			
Product shape					
Electrical form	Types of electrical appliances	Contactor			
	Main Contact System Form	Bridge-form operation (SPST-NO-DM)			
	Current type	DC			
	Medium type at break	Protective gases			
	Operation mode	Electric			
	Rated working system	Uninterrupted working system			
Rating and Limit Values of Main Contacts	Contact polarity	Polarity			
		Non-polarity			
	Rated operating voltage (Ue)		12-900Vdc		
	Rated operating current		1-10A (▲2)		
	Rating short-time tolerance current and duration time		20A 180sec. 30A 120sec.		
	Maximum cutting-off voltage (one-time permitted)		100A 320Vdc		
	Contact Contact Resistance (Initial)		1mΩ Max. (at 1A)		
	Suction time (at 20°C)		25ms Max. (▲3)		
	Contact bounce time (at 20°C)		7ms Max. (▲3)		
	Release time (at 20°C)		12ms Max. (▲4)		
Mechanical Life-time	Mechanical life		1×10 <sup>6</sup> (▲5)		
	Electrical life (▲2, ▲4)	Polarity	See graph-1		
		Non-polarity	See graph-2		
Dielectric properties parameters	insulation resistance		Initial state: 100MΩ Min. (▲1) At the end of life: 50MΩ Min. (▲1)		
	rated impulse withstand voltage(initial)	Main contact interface	AC 2500 Vrms/1mA/1min. (sea level)		
		Main contactor and coil interface	AC 2500 Vrms/1mA/1min. (sea level)		
Mechanical properties			20G Peak value, 11ms 1/2 sinusoid (coil power setup)		
	Vibration		20G Peak value, 80~2,000Hz, sinusoid		
Coil parameters	Rated operating voltage		6Vdc, 12Vdc, 24Vdc, 28Vdc, 36Vdc, 48Vdc, 72Vdc		
	Coil polarity		×		
	Energy-saving circuit board		×		
Auxiliary contact (▲6)			×		
Environmental	Temperature range of use and storage environment		-40°C~95°C		
	Use and storage ambient humidity range		5%~95% RH.		
	Altitude		≤4000m		
weight			120±10g		
Safety certification			CE, CCC, UL		

▲1: measure the voltage DC500V, the testing position is as same as dielectric withstanding voltage

▲2: loading category: DC-1, L/R millisecond

▲3: enforce the rated operation voltage on coil, involves the contactor will bounce.

▲4: enforce the rated operation voltage on coil, without diode.

▲5: rated controlling capacity, transforming frequency, connecting and cutting-off, ON : OFF=0.5second: 0.5second

▲6: assistant contactor parameter: 2A@30VDC/3A@125VAC, 600Vac 50/60Hz 1min.
